

RISKCHECK OVERVIEW Environmental, and Health and Safety Compliance

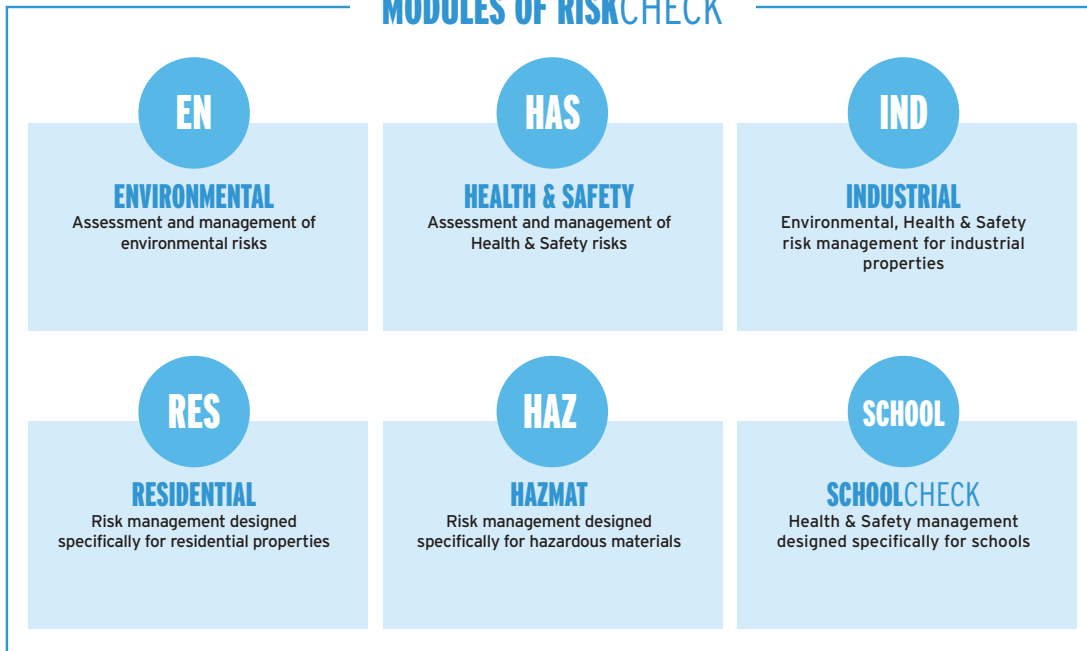

Eliminate or Minimize Potential Risk with our Customized System of Focused Programs

RiskCheck is an Environmental Health and Safety Risk Management company. We have developed a unique management system where each specific module sits seamlessly on the same platform, customized to your business' needs. This allows the management of several areas of risk to be vertically viewed, allowing easier access to information that has relevance to each other.

WHAT IS A MODULE?

RiskCheck Modules are named for the type of risk(s), and/or property being assessed. After the assessment, site-specific questions are designed and uploaded to the system to populate the module.
